

Bin clogs slowing down your production? **VIBCO gets material moving.**

BIN VIBRATORS

We're the ^{SILENT} Vibrator Guys.™

Product Application Bulletin #467 Model 2P-450 Heavy Duty Electric Vibrator

VIBCO'S SOLUTION

VIBCO 2P-450 Heavy Duty Electric Vibrators were mounted to the sand bins so that trapped steam and condensation are released from the sand and material flows without clogging or bridging in the bin. The improved material flow allows a better production rate with zero clogs. Eliminating clogs improved workflow with no more man hours wasted banging on the bin, and, in the process, greatly reduced maintenance.

VIBCO'S BENEFITS

After installing the VIBCO 2P-450 Heavy Duty Electric Vibrators the customer received the following benefits:

- Increased production levels with better flow rate and consistency
- No more labor hours wasted banging out bin clogs
- Reduced maintenance costs with no more damaging bin hammering

“I don't know how we got along without them...”

We make asphalt, so we use a tremendous amount of sand. Our bins would clog pretty regularly because the sand would get sticky as steam and condensation got trapped inside. I guess that we just accepted clearing the clogs as part of our normal maintenance process. Someone would climb up to the bin and bang on it with a sledge hammer until sand started flowing again. Looking back, I can't believe how much material, time, and money we wasted clearing clogs. Since we started using VIBCO Vibrators, we have consistent material flow, we're not wasting product, and we've been able to eliminate a costly piece of our maintenance workflow. Honestly, I don't know how we got along without them.”

Production Manager,
Kevin S., Virginia

Model 2P-450 Heavy Duty Electric Vibrator

- 3,600 VPM
- 1/2 Horse Power
- 1,100 lbs of force
- 64 dB from A-Scale at 1 meter
